

Vishwa Patel

(213)-829-3399 | vishwasa@usc.edu | linkedin.com/in/vishwapatel2405 | github.com/vishwapatel24051

EDUCATION

University of Southern California, CA, USA

January 2026 – December 2027

- Master of Science (M.S.), Computer Science GPA: 3.66/4
- Courses: Analysis of Algorithms, Web Technologies, Database Systems, Agentic AI, Natural Language Processing

Gujarat Technological University, Gujarat, India

August 2019 – June 2023

- Bachelor of Engineering (B.E.), Computer Engineering GPA: 8.98/10
- Courses: Data Structures, Object-Oriented Programming Principles, Theory of Computation, Compiler Design, Software Engineering, Operating Systems

TECHNICAL SKILLS

- Programming Languages:** Java, C++, Python, C, C#, JavaScript, HTML, CSS, Dart
- Databases:** MySQL, SQLite, PostgreSQL, HBase, Cassandra
- Frameworks, Libraries & Tools:** ReactJS, Spring Boot, Spring MVC, Git, Docker, Redis, Elasticsearch, RabbitMQ, jQuery, Flutter

PROFESSIONAL EXPERIENCE

Casepoint Pvt. Ltd, Gujarat, India

Software Engineer

May 2025 – June 2025

- Implemented custom field selection in legal hold reporting module, reducing report generation time by 30% and giving clients configurable, self-service reporting flexibility while maintaining regulatory compliance
- Resolved 10–20 high-priority production support tickets weekly related to file extraction and processing failures, performing root-cause analysis and code-level fixes to meet client SLAs and reduce downstream escalations

Associate Software Engineer

July 2023 – May 2025

- Redesigned the extraction workflow for parallel processing, boosting throughput by ~90% over single-threaded design
- Engineered a PST repair service with automated recovery, retry logic, and concurrency control to process corrupted mailbox files, reducing manual intervention by 50–70% and integrating seamlessly with downstream extraction pipelines
- Designed a Redis-based status tracking system spanning 6+ processing stages, delivering real-time document-state updates and reducing status update latency by 80%
- Extended the metadata extraction service to support a new file format for forensic analysis, integrating it into the existing pipeline; also added a companion agent to track audio-peak collection progress in real time via request ID
- Upgraded core extraction libraries (Oracle, Aspose, VintaSoft) to improve format compatibility, cutting extraction errors and failures by 40%+
- Collaborated with 5+ cross-functional product and engineering stakeholders to assess requirement impact, ensure technical alignment, and deliver 8+ production features end to end

Software Engineer Intern

January 2023 – June 2023

- Developed a desktop-based Recruitment System using .NET MVC, C#, Windows Forms, PostgreSQL, and Kendo UI, implementing 20+ UI screens, the MVC design pattern, and comprehensive client/server-side validations to improve maintainability and user experience
- Integrated RabbitMQ for asynchronous internal messaging between application components, delivering features in an Agile development cycle

Amiseq, Pune, India

Software Engineering Intern (Backend)

June 2022 – July 2022

- Developed 10+ RESTful API endpoints using Spring Boot and PostgreSQL, implementing CRUD operations and modular services following a microservices architecture
- Tested and debugged API endpoints with Postman, catching integration issues before deployment and validating request/response handling across service layers

PROJECTS

TechHire: AI Job Search Platform | Python, FastAPI, React, PostgreSQL | GitHub

May 2026 – June 2026

- Built a full-stack job platform (200+ live postings) with fast search/filtering by skills, salary, visa sponsorship, and work mode, backed by a search API averaging ~7ms response time
- Built an AI resume analyzer (Groq/Llama, 3-model pipeline) that scores candidate fit 0–100 and rewrites weak bullets against the target job – validated with test cases showing an 85-point spread between strong- and weak-fit resumes

Sequence Alignment | Python | GitHub

April 2026 – May 2026

- Implemented global DNA sequence alignment via Needleman-Wunsch DP and Hirschberg's divide-and-conquer, cutting space from $O(mn)$ to $O(m+n)$ with identical optimal alignments; benchmarked CPU time and peak memory

Speed Medilane – Medicine Ordering & Pharmacy App | Flutter, Dart | GitHub

March 2026 – May 2026

- Created a cross-platform Flutter app for medicine search, daily medication reminders, nearby pharmacy lookup, and preorders
- Integrated Supabase PostgreSQL with Row Level Security and SECURITY DEFINER RPCs, blocking direct table access

CERTIFICATIONS & AWARDS

- Python for Everybody Specialization** (Coursera) – Certification in Python, databases, web scraping, and data visualization
- Casepoint Excellence Award 2024** (Sprint Delivery Standout) – Awarded for outstanding sprint delivery and performance
